

Customer Churn Analysis

Problem Statement

A telecom company is experiencing a high churn rate and wants to understand the reasons behind it. They aim to analyze customer demographics, usage patterns, and service feedback to identify churn indicators. The dashboard should help the customer service team to proactively retain customers by identifying at-risk segments. KPIs include churn rate, average tenure, and customer satisfaction score.

Table Structures

- Table: Customers

Columns: CustomerID, Name, Age, Gender, Region, Tenure, Churn

- Table: Usage

Columns: CustomerID, CallMinutes, DataUsage, MessagesSent

- Table: Feedback

Columns: CustomerID, SatisfactionScore, Complaints

Relationships and Constraints

- Usage.CustomerID → Customers.CustomerID (Foreign Key)
- Feedback.CustomerID → Customers.CustomerID (Foreign Key)

Analytical Questions

1. What is the overall churn rate?
2. Which age groups have the highest churn?
3. How does data usage correlate with churn?
4. What is the average tenure of churned customers?
5. Which regions have the highest churn rate?
6. What is the satisfaction score distribution?
7. How many complaints were raised by churned customers?
8. What is the churn rate by gender?
9. Which usage patterns indicate potential churn?
10. How does churn vary by tenure?
